

Review of the research work

Here are my reviews about the research work of the MA student at your department.

1. The researcher should be careful about repetitions in the text (Objectives of the study are mentioned twice).
2. The researcher should be clear about the methodology of the research work and have a separate title for Methodology.
3. Literature review part should discuss the research work carried out in the field so far.
4. The researcher should be careful about plagiarism. The sources cited in the text should be mentioned in the reference list.
5. The researcher should prefer using formal speech rather than informal one in an academic work.
6. Finally, the language of the research work should be proofread.
